Cylindrical Type Proximity Sensor

▣ Features

- Improved the noise resistance with dedicated IC
- Built-in reverse polarity protection circuit (DC 3-wire type)
- Built-in surge protection circuit
- Built-in overcurrent protection circuit (DC type)
- Long life cycle and high reliability, and simple operation
- Protection structure IP67 (IEC standard)
- Replaceable for micro switches and limit switches

⚠ **Please read "Caution for your safety" in operation manual before using.**

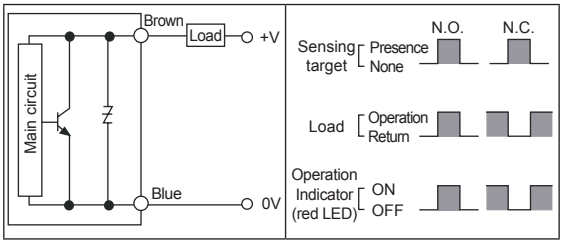
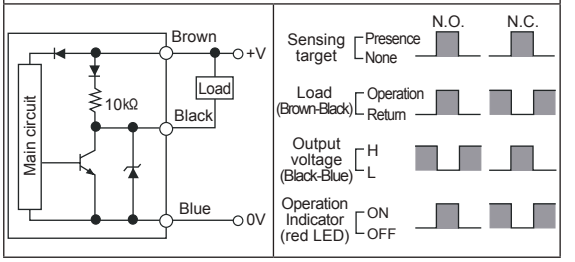
▣ Control Output Diagram

◎ DC 2-wire type

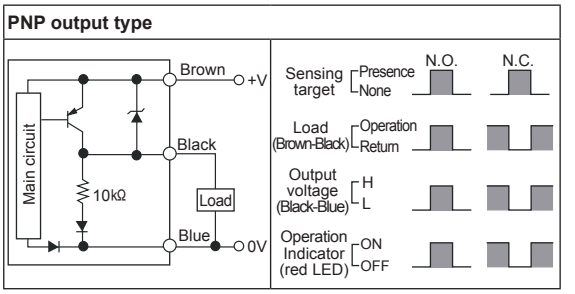


◎ DC 3-wire type

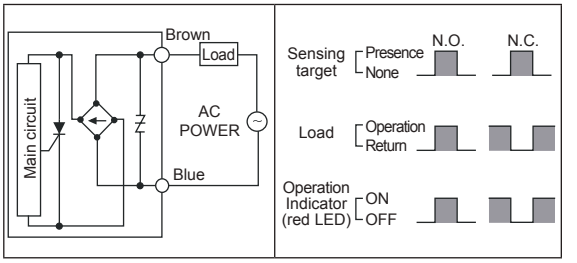
NPN output type



PNP output type

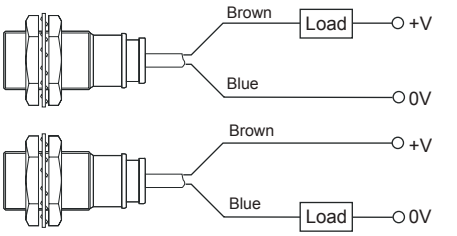


◎ AC 2-wire type



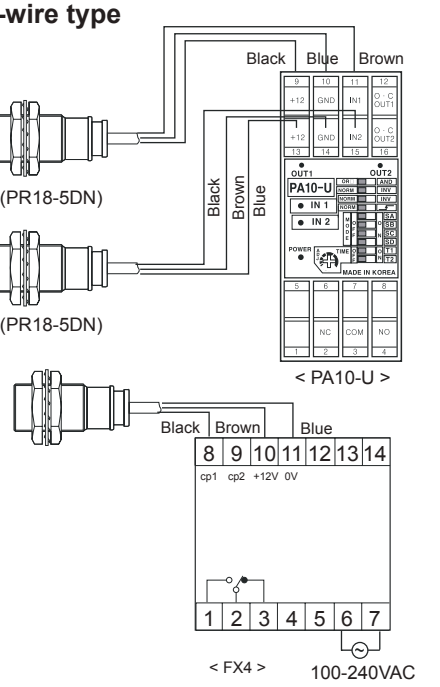
▣ Connections

◎ DC 2-wire type

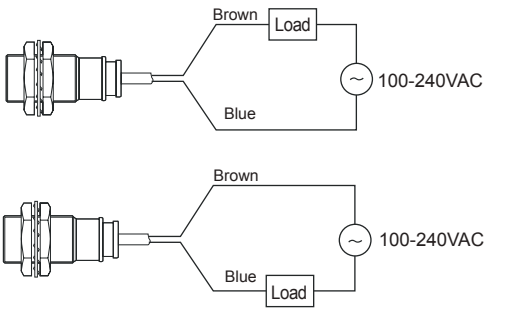


※Load can be wired to any direction.
※No need to consider polarity for non-polarity type of power supply.

◎ DC 3-wire type



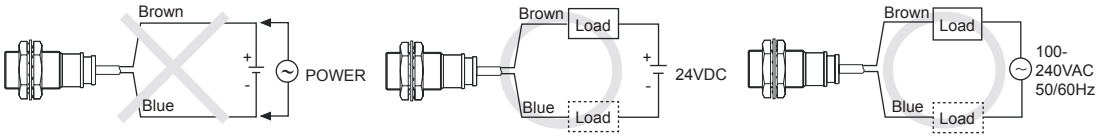
◎ AC 2-wire type



※The load can be connected to either wire.

▣ Proper Usage

◎ Load connections

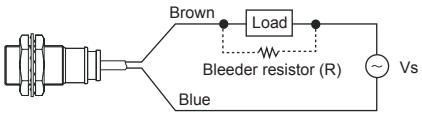


< DC 2-wire type & AC 2-wire type > < DC 2-wire type > < AC 2-wire type >

When using DC or AC 2-wire type proximity sensor, the load must be connected, otherwise internal components may be damaged. The load can be connected to either wire.

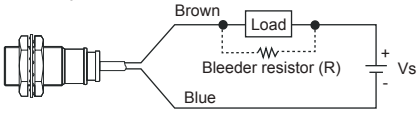
◎ Load connections

● AC 2-wire type



110VAC: Min. 20kΩ 3W
220VAC: Min. 39kΩ 10W

● DC 2-wire type



It may cause return failure of load by residual voltage.
If the load current is under 5mA, please make sure the residual voltage is less than the return voltage of the load by connecting a bleeder resistor in parallel with the load as shown in the diagram.

$$R \le \frac{Vs}{I}(\Omega) \qquad P > \frac{Vs^2}{R}(W)$$

[I:Action current of load, R:Bleeder resistance, P:Permissible power]

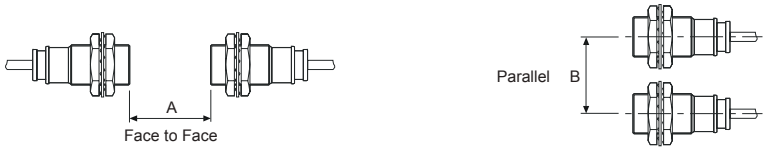
Please make the current on proximity sensor smaller than the return current of load by connecting a bleeder resistor in parallel.
※W value of Bleeder resistor should be bigger for proper heat dissipation.

$$R \le \frac{Vs}{Io\text{-}Ioff}(\Omega) \qquad P > \frac{Vs^2}{R}(W)$$

[Vs: Power supply, Io: Min. action current of proximity sensor,
Ioff: Return current of load, P : Number of Bleeder resistance watt]

◎ Mutual-interference & Influence by surrounding metals

When several proximity sensors are mounted close to one another a malfunction of the may be caused due to mutual interference. Therefore, be sure to keep a minimum distance between the two sensors as below chart indicates.



When sensors are mounted on metallic panel, it is required to protect the sensors from being affected by any metallic object except target. Therefore, be sure to provide a minimum distance as below chart indicates.
