Specialized Functions for Fan and Pump

The iP5A, specifically designed for HVAC application, provides stable and cost-effective system performance.

PID Control

In the centrifugal fan and pump field, PID control is provided as a standard function in order to maintain a constant control of pressure, flow and oil level. This function includes Pre-PID, Sleep and Wake up and output inverse sub-functions.

Dual PID

Where external or cascaded PID control is required, the built-in dual PID algorithm of the iP5A can be utilized to satisfy various system requirements.

Multi Motor Control (0.75~450kW)

The iP5A MMC function provides cost-effective, simultaneous control of up to eight motors, without requiring external controllers.

Marine Type Certification From DNV

The iP5A has been tested and certified by DNV to comply with International Marine requirements

Energy Saving and High Efficiency

The iP5A, specifically designed for fan and pump applications, guarantees energy savings by optimizing the system.

Sleep and Wake-up Function

Energy savings are obtained through the Sleep and Wake-Up functions of the iP5A, which enable the drive to automatically switch off during user-programmed low-load conditions and then to start up again when process demand increases.

Pre Heating Function

When using the drive in damp conditions, this function protects both the motor and the drive's output

Flying Start Function

When 2 or more fans, or a high inertia load are connected to the drive, the iP5A detects the motor speed after a momentary power failure, enabling the motors to be smoothly reaccelerated without mechanical and electrical shock-loading to the system.

Automatic Energy Saving

Load change may incur energy losses but the optimized flux control of iP5A results in more outstanding energy saving compared to previous models.

Intelligent Control

Because of effectual functions and protection algorithms, the iP5A provides constant performance, in spite of external power fluctuations.

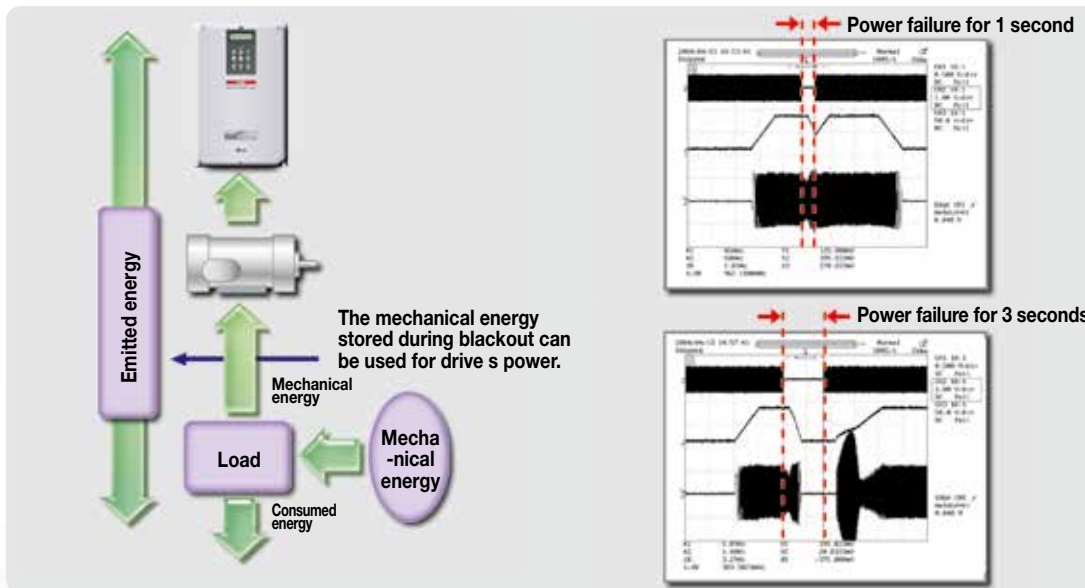

Constant and Stable Performance

In spite of external voltage fluctuations and lightning surges, the iP5A optimizes motor performance.

Improved System Management during Power Dips and Momentary Power Outages

During Power Dips or Momentary Power Outage, the drive output can be maintained by utilizing the residual mechanical energy in the load as a regenerative source. The duration of the power-dip ride-through depends on the load characteristics.

Safety Stop

During unexpected power failure conditions, the iP5A can bring the load to a controlled stop, by utilizing the inertial energy. This can prevent further process problems or accidents.

Current Leakage Reduction Algorithm

Under damp conditions, leakage currents can occur when using drives. These currents can cause a system failure. The iP5A low-leakage PWM algorithm reduces these leakage currents to ensure reliability of operation.

Flux Braking Algorithm

This algorithm reduces deceleration time, thereby improving system efficiency.

Automatic Carrier Frequency Change

By taking ambient temperature into account, the iP5A can automatically adjust the Carrier (Modulation) Frequency.

Protection

The iP5A has optimized protective functions, such as safety stop and pre-excitation of the motor, amongst others.

User-friendly Keypad & Easy Maintenance

The iP5A construction allows for easy maintenance, with ease-of-access to all components.

Easy Start

When pushing 'STOP' key for 2~3 seconds in case drive turns on, the drive turns into 'Easy Start Mode' with FWD, REV, and STOP command. 'SHIFT/ESC' can return it to previous mode.
Control method: V/F
Control frequency: Jog

1 NPN/PNP Input

iP5A has both NPN and PNP input, and you can select one of them easily.

2 Abundant I/O Suggestion

iP5A serves abundant I/O.

Digital Input/Output	8 points / 4 points
Analog Input (Voltage + Current)/Output	(1+1) points /4 points
Pulse Input	1 point
NTC/PTC Input	1 point

3 Various Units of I/O Display

The iP5A display can be calibrated in many different types of process units.

DRV_REF 500.0mBa 15 FBK 82.1mBa	DRV_REF 500.0kPa 15 FBK 82.1kPa
------------------------------------	------------------------------------

4 Built-in RS485 and Optional Communication

The built-in RS485 allows for communication without external option. However, the optional communication boards enable the iP5A to talk to BMS and most Industrial Systems

5 Long-life Condenser and Simple Framework

iP5A adopts long-life condenser and enables easy maintenance in simple framework.

6 Consumption Time Display

iP5A displays consumption time of components so that users can replace them in time.

7 Others

- Removable terminal board
- External fan available
- Cooling fan on/off control

Common Specifications

Control	Cooling method		Forced air cooling (Self-cooling for below 1.5kW-2, 2.2kW-4)
	Control Method		V/F, Sensorless Vector, Slip Compensation, Easy Start Selectable
	Frequency Setting Resolution		Digital Reference: 0.01 Hz (Below 100 Hz), 0.1 Hz (Over 100 Hz) Analog Reference: 0.01 Hz / 60 Hz
	Frequency Accuracy		Digital: 0.01% of the max frequency Analog: 0.1% of the max frequency
	V/F Pattern		Linear, Squared Pattern, User V/F
	Overload Capacity		110% per 1 min, 120% per 1 min ^{Notes)}
	Torque Boost		Manual Torque Boost (0 ~ 15 %), Auto Torque Boost
Operation	Operation Method		Keypad / Terminal / Communication Operation
	Frequency Setting		Analog: 0 ~ 12V / -12V ~ 12V / 0~20mA/ Pulse / Ext-PID Digital: Keypad
	Input Signal	Start Signal	Forward, Reverse
		Multi-Step	Up to 18 Speeds can be set including Jog (Use Programmable Digital Input Terminal, Including Jog/Dwell)
		Multi Step Accel/Decel Time	0.1~ 6,000 sec, Max 4 types can be set via Multi- Function Terminal. Accel/Decel Pattern: Linear, U-Curve, S-Curve Selectable
		Emergency Stop	Interrupts the Output of Drive
		Jog	Jog Operation
	Output signal	Fault Reset	Fault Reset
		Operating Status	Frequency Detection Level, Overload Alarm, Stalling, Over Voltage, Low Voltage, Drive Overheating/ Running/ Stopping/ Constant running, Drive By-Pass, Speed Searching
		Fault Output	Contact Output (3A, 3C, 3B) - AC 250V 1A, DC 30V 1A
Indicator		Choose 2 from Output Frequency, Output Current, Output Voltage, DC Link Voltage (Output Voltage: 0 ~ 10V)	
Operation Function		DC Braking, Frequency Limit, Frequency Jump, 2 nd Function, Slip Compensation, Reverse Rotation Prevention, Auto Restart, Invert By-Pass Auto-Tuning PID Control Start Stop Braking leakage Pre-PID Dual-PID MMC Start Prer By Pass, Auto Tuning, Control, Flying Start, Safety Stop, Flux Braking, Low leakage, Pre PID, Dual PID, MMC, Easy Start, e-heater	
Protection	Drive Trip		Over Voltage, Low Voltage, Over Current, Ground Fault, Drive Overheat, Motor Overheat, Output Phase Open, Overload Protection, External Fault 1, 2, Communication Error, Loss of Speed Command, Hardware Fault, Option Fault etc
	Drive Alarm		Stall Prevention, Overload Alarm, Thermal Sensor Fault
Display	Keypad	Operation Information	Output Frequency, Output Current, Output Voltage, Frequency Set Value, Operating Speed, DC Voltage, Integrating Wattmeter, Fan ON time, Run-time, Last Trip Time
		Trip Information	Trips Indication when the Protection Function activates. Max. 5 Faults are saved. Last Trip Time.
Environment	Ambient Temperature		-10°C ~ 50°C (14°F ~ 122°F) Decrease 2% of rated current for every 1°C increase in above 40°C
	Storage Temperature		-20°C ~ 65°C (-4°F ~ 149°F)
	Ambient Humidity		Below 90 % RH Max. (Non-Condensing)
	Altitude-Vibration		Below 1,000m (From 1000 to 4000m, the rated input voltage and rated output current of the drive must be derated by 1% for every 100m.), Below 5.9m/sec ² (0.6g)
	Application Site		Pollution degree 2, No Corrosive Gas, Combustible Gas, Oil Mist, or Dust

(1) Rated capacity ($\sqrt{3} \times V \times I$) is based on 220V for 200V class and 460V for 400V class.

(3) IP20 or UL Enclosed Type1 can be provided by the option.

(5) Overload rating 120%, 1 min is based on ambient 25°C

(2) Indicates the maximum applicable capacity when using a 4-Pole standard motor.

(4) IP20 or UL Enclosed Type1 is not provided.

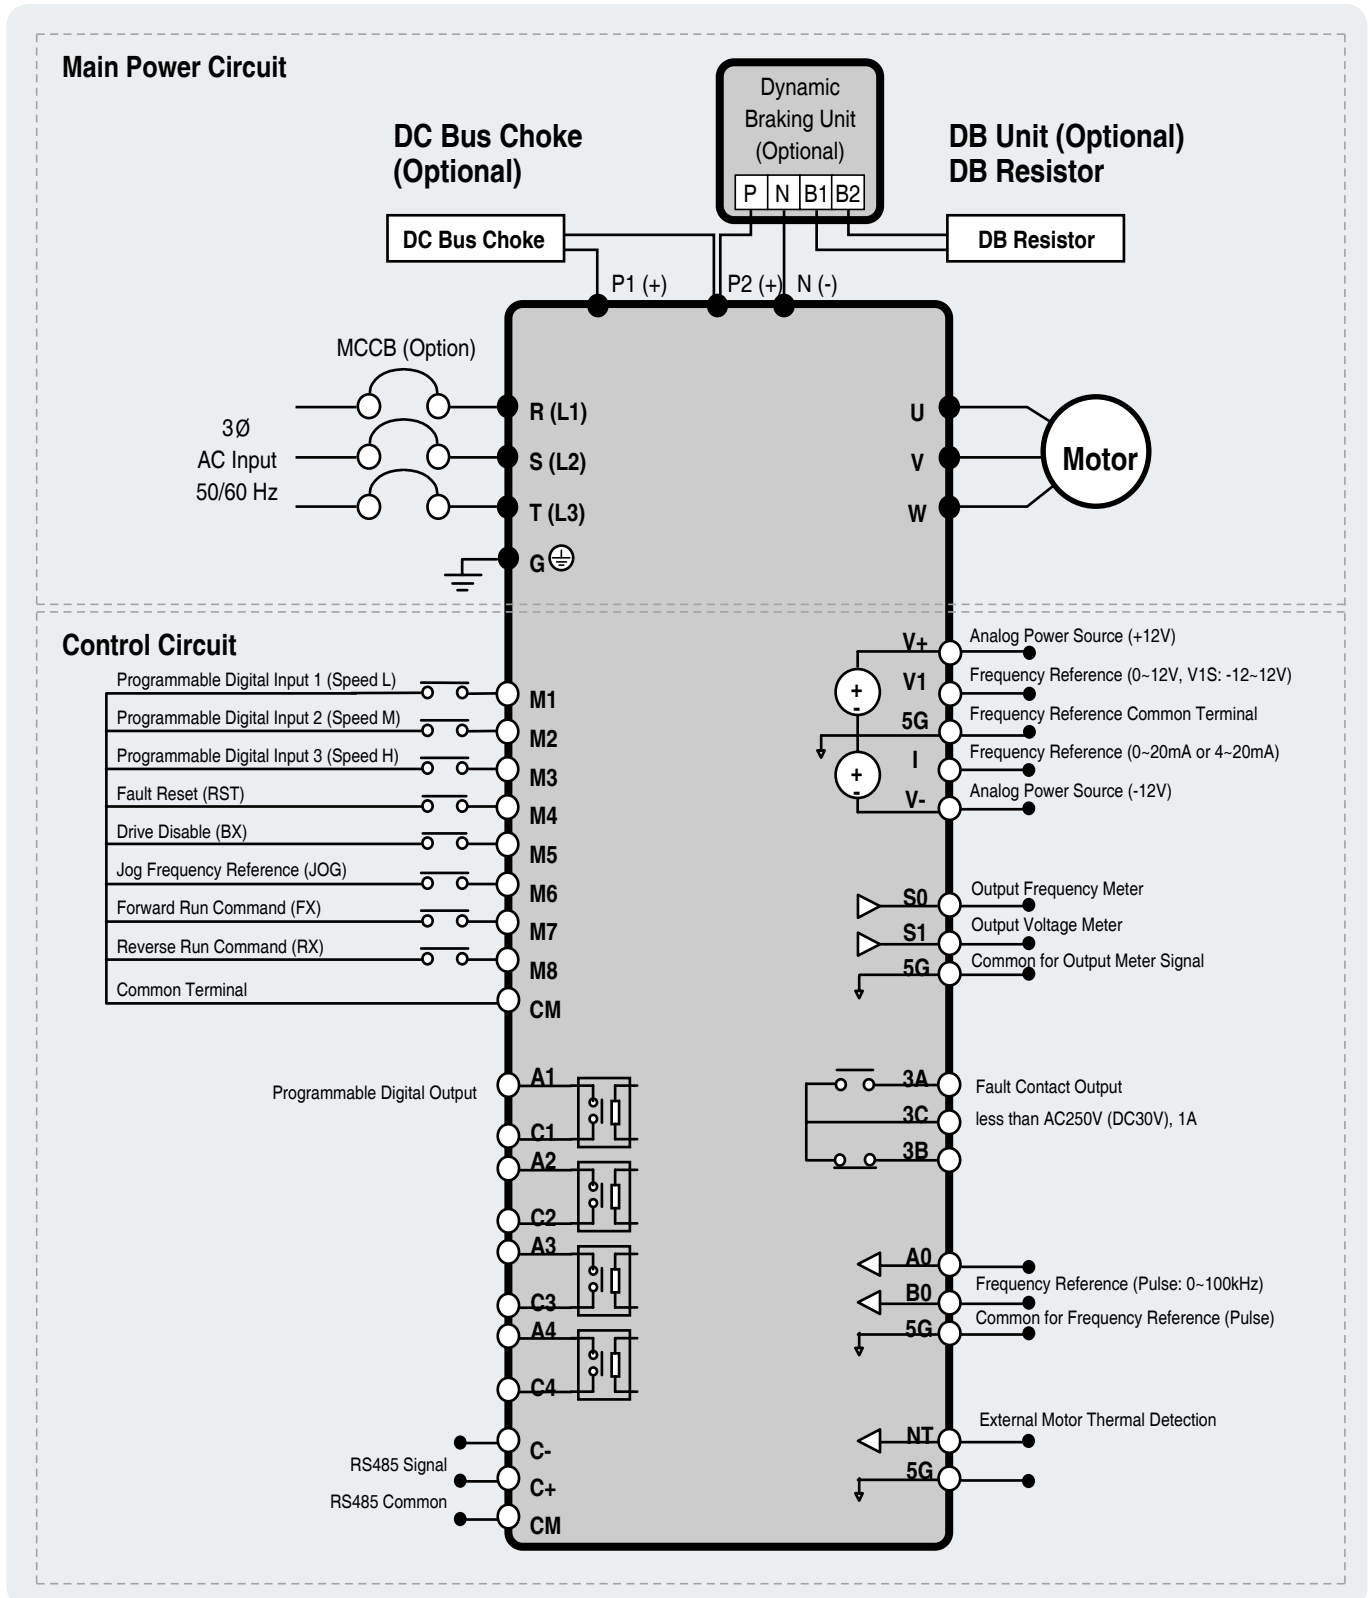

Standard Specifications

Common Specifications (External)

Keypad	LCD	32 character display Keypad Download and Upload available	All units
Remote	Remote cable	2m, 3m and 5m long keypad cable enables users to control the drive from a distant area	Optional
Dynamic braking	DB resistor	To enhance the regenerative braking performance, it makes the drive to accelerate/decelerate rapidly	According to drive capacity
	DB unit	If it need a regenerative braking, it is used with DB resistor	
Conduit option	Conduit for NEMA TYPE 1	Install it to fit for NEMA TYPE 1 Enclosure or IP20	15~90kW (20~125HP)
Communication option card	DEVICENET	DEVICENET optional communication card	All series (Above S/W V10)
	PROFIBUS	PROFIBUS optional communication card	All series (Above S/W V10)
	LS485/MODBUS_RTU	LS485/MODBUS_RTU optional communication card	All series (Above S/W V10)
	LonWorks	Lonworks optional communication card	All series (Above S/W V10)
	BACNet	BACNet optional communication card	All series (Above S/W V10)
	MODBUS_TCP	MODBUS_TCP optional communication card	All series (Above S/W V10)
	Metasys_N2	Metasys_N2 optional communication card	All series (Above S/W V10)
	CCLink	CCLink optional communication card	All series (Above S/W V10)
	CANopen	CANopen optional communication card	All series (Above S/W V10)

Wiring

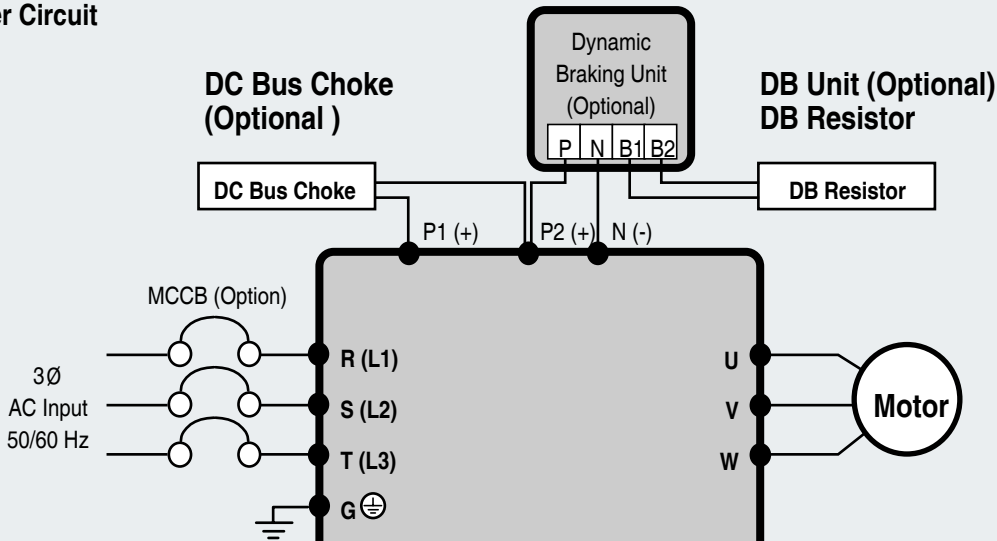

■ For 0.75~30kW (1~40HP)

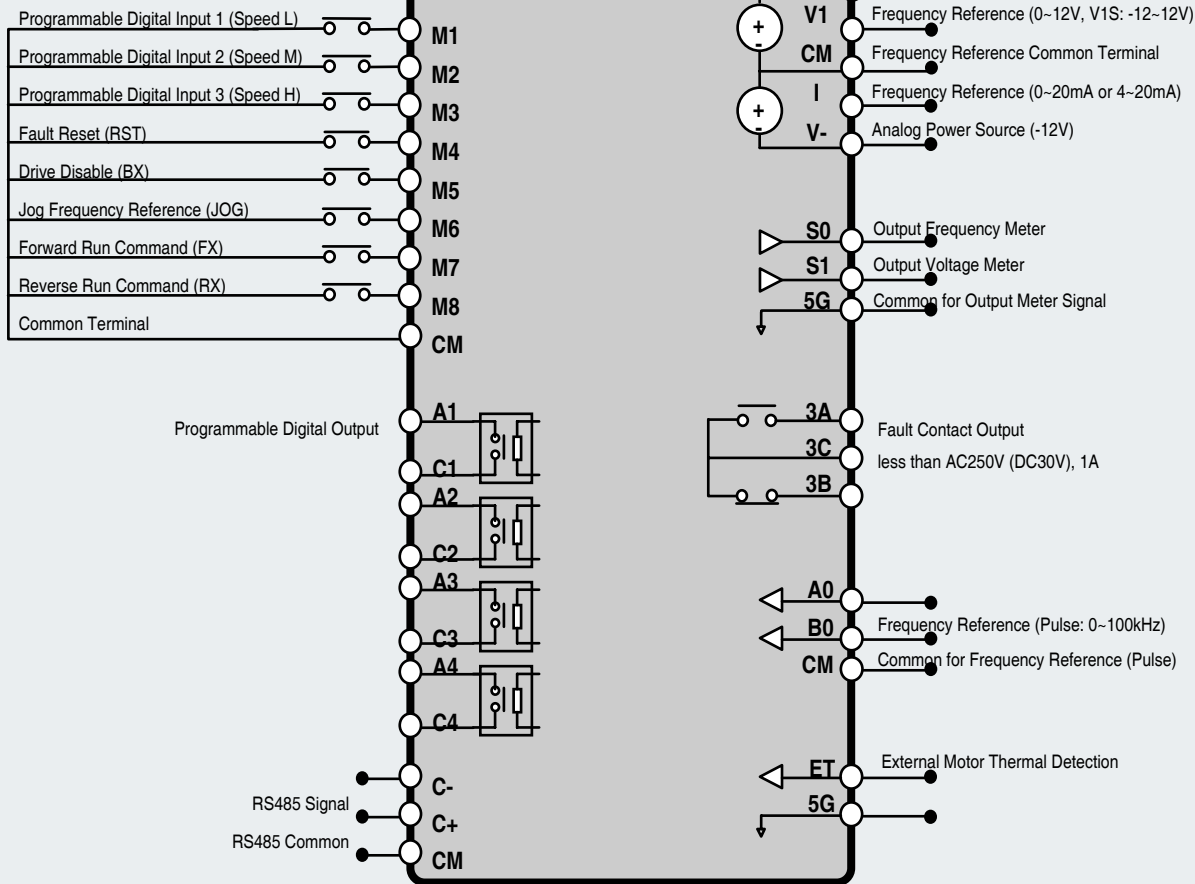

- Note 1) 5G is Common Ground for Analog Input / Output. (Only applied to 0.75 - 30kW products)
- 2) Use terminal V1 for V1, V1S (0~12V, -12~-12V) input.
- 3) To add DC reactor, Remove DC Bus Choke and connect to P1(+), P2(+).
- 4) SA, SB terminal is provided with 600V class model only.

■ For 37~90kW (50~125HP) / 315~450kW (400~600HP)

Main Power Circuit

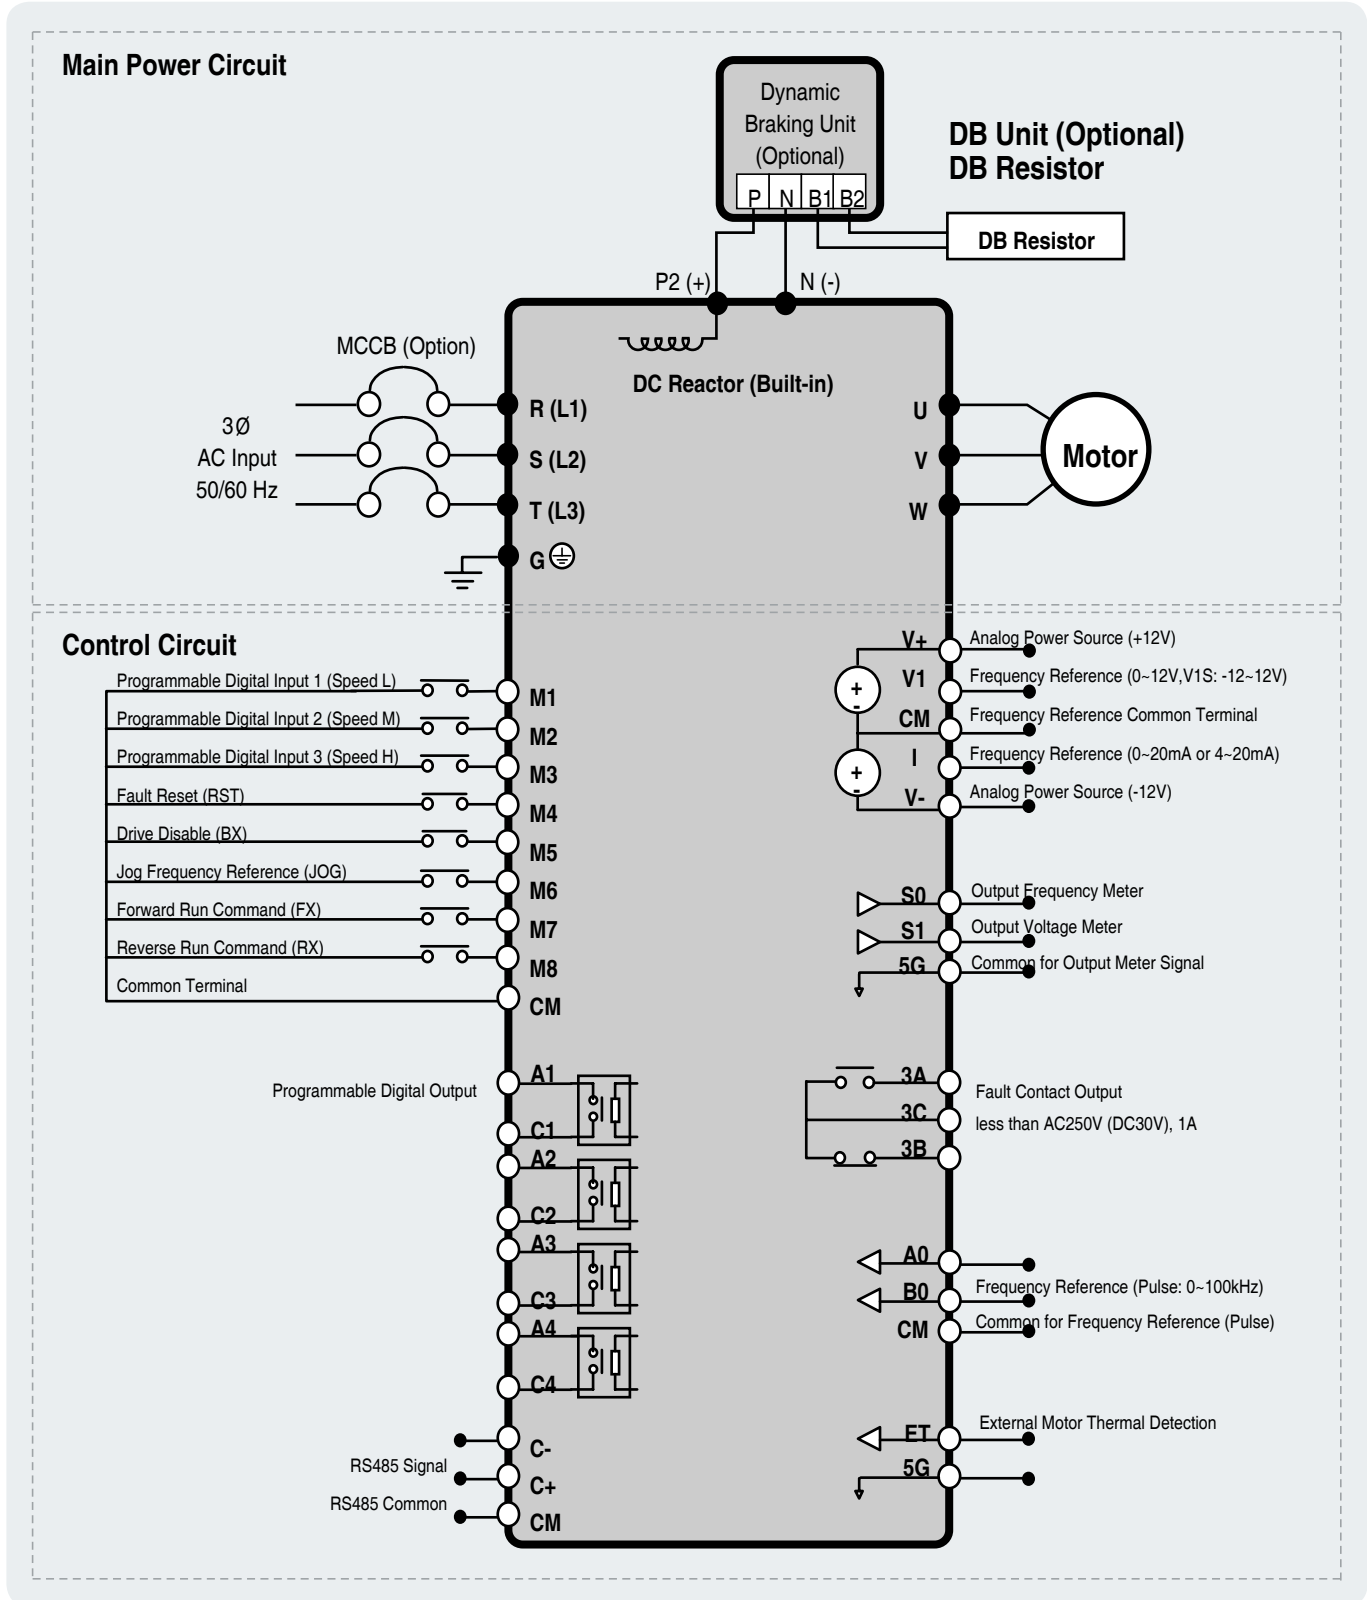

Control Circuit

- Note 1) 5G is Common Ground for Analog Meter Output (S0, S1) and External motor thermal detection (ET). CM is Common Ground for Analog input.
- 2) Use terminal V1 for V1, V1S (0~12V, -12~-12V) input.
- 3) To add DC reactor, remove DC Bus Choke and connect to P1(+), P2(+).
- 4) SA, SB terminal is provided with 600V class model only.

■ For 110~280kW (150~350HP)

Note 1) 5G is Common Ground for Analog Meter Output (S0, S1) and External motor thermal detection (ET). CM is Common Ground for Analog input.
 2) Use terminal V1 for V1, V1S (0~12V, -12~12V) input.
 3) DC Reactor is built basically in the inverters for 110~280kW(150~350HP)
 4) SA, SB terminal is provided with 600V class model only.

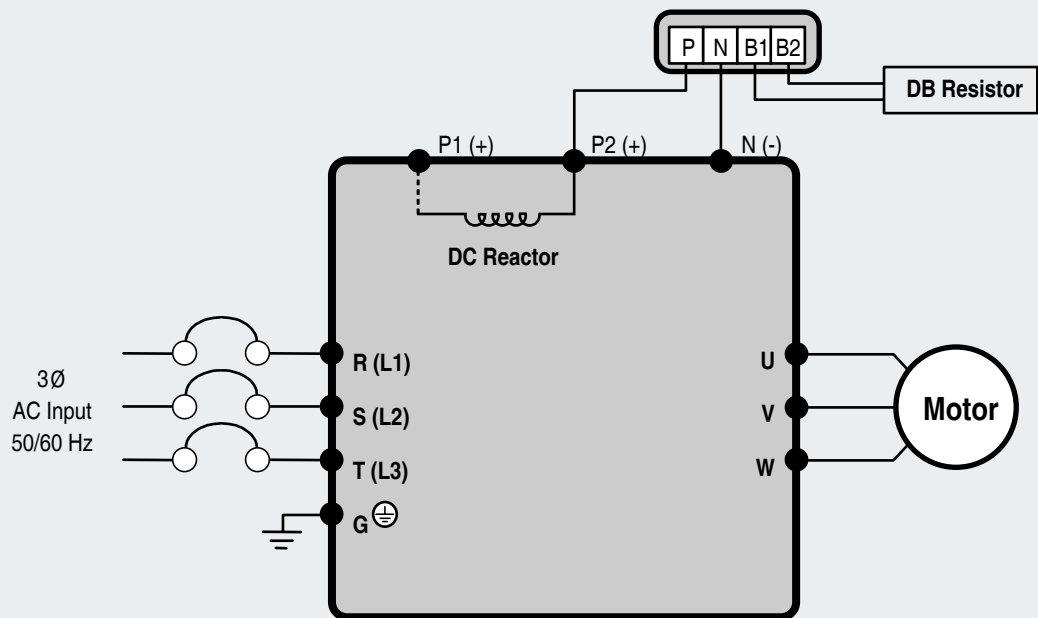

iP5A

Wiring

■ For 15~30kW (20~40HP) Built-in DCL Type

■ For 37~90kW (50~125HP) Built-in DCL Type

Note) P1 (+) is not provided for wiring.

Terminal Configurations (Power Circuit Terminal)

■ 0.75~30kW (1~40HP) <200V/400V/600V Class>

■ 37~90kW (50~125HP) / 315~450kW (400~600HP) <400V/600V Class>

■ 15~18.5kW (20~25HP) <Built-in DC Reactor Type, 400V Class>

■ 22~30kW (30~40HP) <Built-in DC Reactor Type, 400V Class>

■ 37~90kW (50~125HP) / 110 ~280kW (150~350HP) <Built-in DC Reactor Type, 400V Class>

Note) P1 (+) is not provided for wiring.

Symbol	Description
R, S, T (L1, L2, L3)	AC Line Voltage Input
G	Earth Ground
P1 (+), P2 (+)	External DC Reactor [P1 (+)-P2 (+)] Connection Terminals (Jumper must be removed).
P2 (+), N (-) or P (+), N (-)	DB Unit [P2 (+)-N (-)] Connection Terminals
U, V, W	3 Phase Power Output Terminals to Motor

Terminal Configurations (Power Circuit Terminal)

■ Grounding

Drive Capacity		Grounding wire Sizes, AWG or kcmil (mm ²)		
kW	HP	200V Class	400V Class	600V Class

* Apply the rated torque to terminal screws. * Loose screws can cause of short circuit or malfunction. Tightening the screw too much can damage the terminals and cause a short circuit or malfunction.
 * Use copper wires only with 600V, 75°C ratings. For 7.5~11kW 240V type drives, R(L1), S(L2), T(L3) and U, V, W terminals are only for use with insulated ring type connector.

Terminal Configurations (Control Circuit Terminal)

■ 0.75~30kW / 1~40HP (200V/400V Class)

■ 37~450 kW/50~600HP (400V Class)

Terminal Configurations (Control Circuit Terminal)

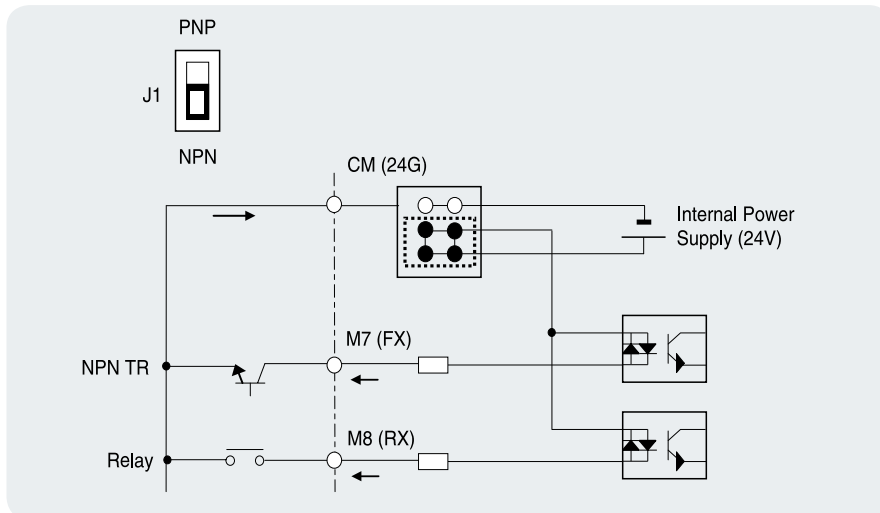

Type	Symbol	Name	Description
Input Signal	Starting Contact Function Select	M1, M2, M3	Programmable Digital Input 1, 2, 3 Defines programmable digital inputs (Factory setting : Multi-step frequency 1,2,3)
		FX [M7]	Forward Run Command Forward run when closed and stopped when open
		RX [M8]	Reverse Run Command Reverse run when closed and stopped when open
		JOG [M6]	Jog Frequency Reference Runs at jog frequency when the jog signal is on. The direction is set by the FX (or RX) signal
		BX [M5]	Emergency Stop When the BX signal is ON, the output of the drive is turned off. When motor uses an electrical brake to stop, BX is used to turned off the output signal. Take caution when BX signal is off (Not turned off by latching) and FX signal (or RX signal) is on. Under these conditions, the motor will run!
		RST [M4]	Fault Reset Used for fault reset.
		CM	Sequence Common (NPN) Common terminal for NPN contact
		24	Sequence Common (PNP) Common 24V terminal for PNP contact input. Maximum output : +24V, 100mA
	Analog Frequency Setting	V+, V-	Analog Power Source (+12V,-12V) Power supply for analog frequency setting. Maximum output : +12V, 100mA, -12V, 100mA
		V1	Frequency Reference (Voltage) Used by a DC 0~12V or -12~12V input to set the frequency reference. (Input impedance is 20kΩ)
		I	Frequency Reference (Current) Used by a 0-20mA input to set the frequency reference. (Input impedance is 249Ω)
		A0, B0	Frequency Reference (Pulse) Used by a pulse input to set the frequency reference.
		5G (~30kW) CM (37kW~)	Frequency Reference Common Terminal Common terminal for analog frequency reference signal
	External Motor Thermal Detection	NT (~30kW) ET (37kW~)	External Motor Thermal Detection Motor thermal sensor input. Used to prevent motor from overheating by using a NTC or PTC thermal sensor.
5G		Common for NT (or ET) Common terminal for external motor thermal detection	
Built-in RS485 Terminal	C+, C-	RS485 signal High, Low RS485 signal (See RS485 communication in manual for more details.)	
	CM	RS485 common Common ground. Terminal for RS485 interface.	
Output Signal	Analog Output	S0, S1,	Programmable Voltage Output Voltage output for one of the following : Output frequency, output current, output voltage, DC link voltage. Default is set to output frequency. (Maximum output voltage and output current are 0-12V and 1mA)
		5G	Analog Common Terminal Common terminal for analog output (S0, S1)
	Contact	3A, 3C, 3B	Fault Contact Output Energizes when a fault is present. (AC250V, 1A; DC30V, 1A) Fault : 3A-3C closed (3B-3C open) Normal : 3B-3C Closed (3A-3C open)
		A1~4, C1~4	Programmable Digital Output Defined by programmable digital output terminal settings (AC250V, 1A or less; DC30V, 1A or less)

Note) NC terminal is unavailable

iP5A provides Sink/Source (NPN/PNP) modes for sequence input terminal on the control circuit. The logic of the input terminal is settable to Sink mode (NPN mode)/Source mode (NPN mode) by using the J1 switch. Connection method is shown below.

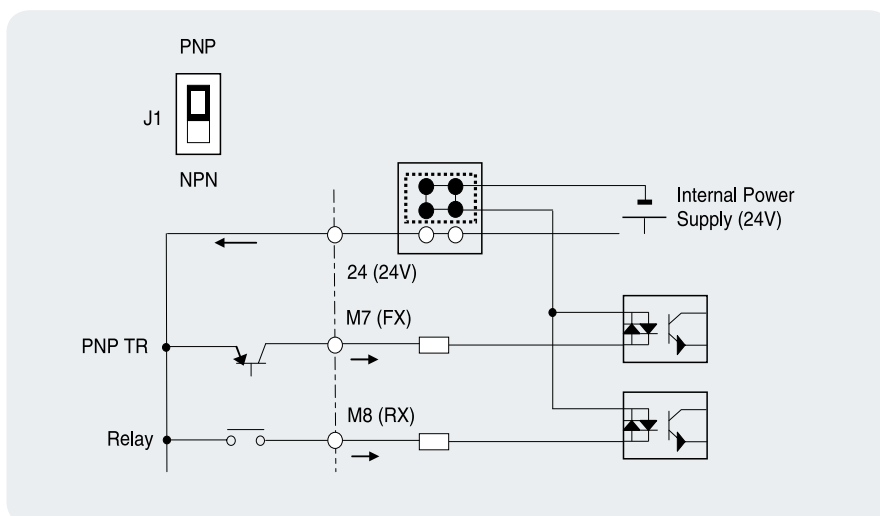

Sink mode (NPN mode)

- Put J1 switch down to set to Sink mode (NPN mode). CM terminal (24V GND) is common terminal for contact signal input.
- The factory default is Sink mode (NPN mode).

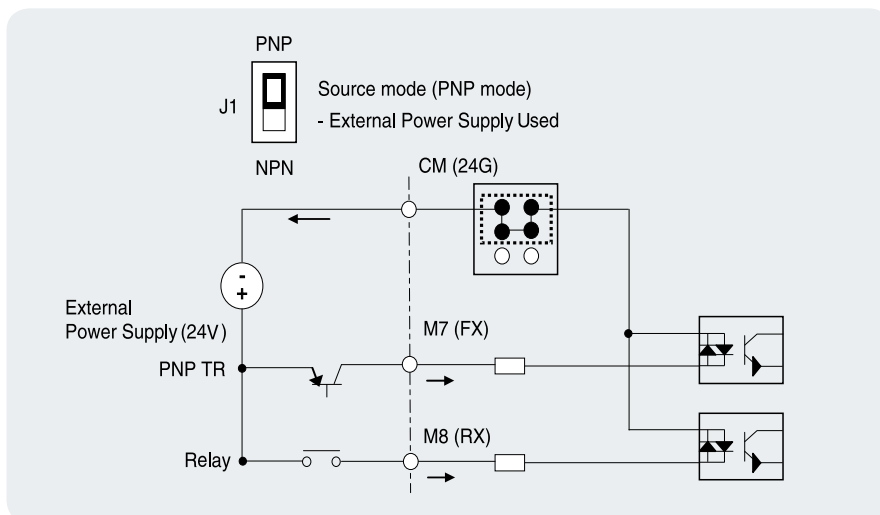

**Source mode (PNP mode)
Internal Power Supply Used**

- Put J1 switch up to set to Source mode (PNP mode). Terminal 24 (24V Power Supply) is common terminal for contact input signal.

**Source mode (PNP mode)
External Power Supply Used**

- Put J1 switch up to set to Source mode (PNP mode).
- To use external 24V Power Supply, make a sequence between external Power Supply (-) terminal and CM (24V GND) terminal.

Trial Run

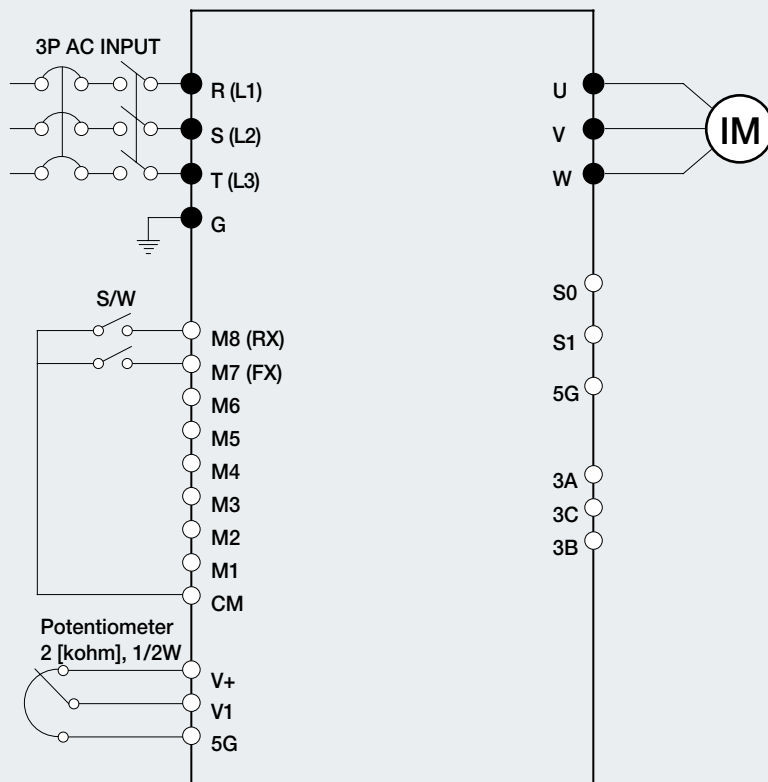

■ Operation Example (1)

V/F Control + Analog Voltage Input (V1)
+ Operation via Terminal (FX/RX)

Operation condition

- Control mode: V/F control
- Frequency command: 50 [Hz] analog input via V1 terminal
- Accel/Decel time: Accel -15 [sec], Decel -25 [sec]
- Drive mode: Run/Stop via FX/RX terminal, Control terminal: NPN mode

Wiring

Step	Parameter setting	Code	Description
1	Control Mode Selection	FU2-60	Set it to 0 (V/F).
2	Drive Mode	DRV-3	Set it to Fx/Rx-1.
3	Frequency Mode	DRV-4	Set V1 Analog input value in frequency mode.
4	50 [Hz] Freq Command Setting	DRV-0	Set freq command 50 [Hz] via V1 (Potentiometer).
5	Accel/Decel Time	DRV-1 DRV-2	Set Accel time to 15 [sec] in DRV-2. Set Decel time to 25 [sec] in DRV-3.
6	Terminal FX	I/O-26	Motor starts to rotate in forward direction at 50Hz with Accel time 15 [sec] when FX terminal is turned ON. Motor decelerates to stop with Decel time 25 [sec] when FX terminal is turned OFF.
7	Terminal RX	I/O-27	When RX terminal is turned ON motor starts to rotate in Reverse direction at 50 [Hz] with Accel time 15 [sec]. When it is OFF, motor decelerates to stop with Decel time 25 [sec].

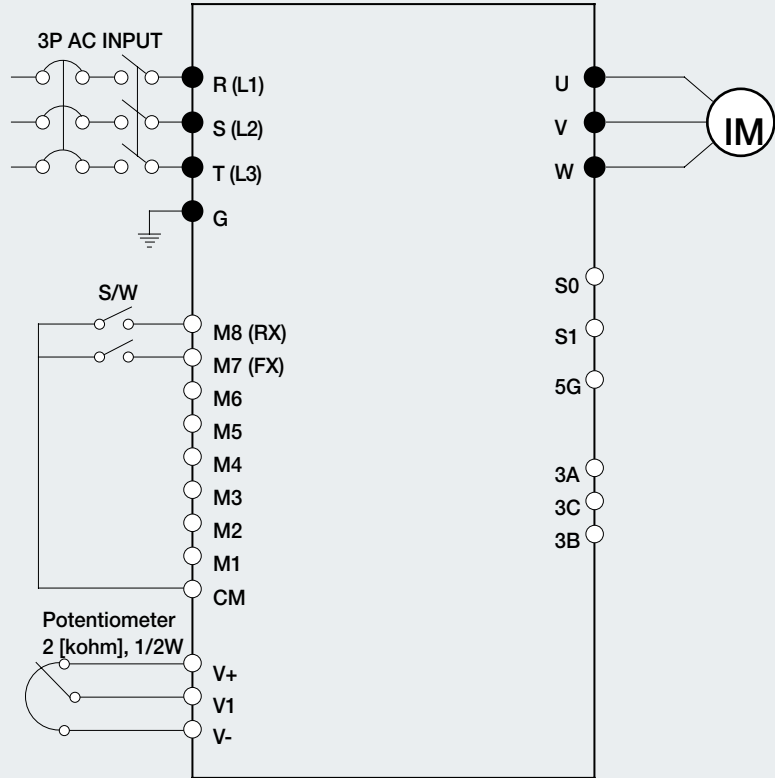

Operation Example (2)

V/F control + Analog input (V1S)
+ Operation via terminal FX/RX

Operation condition

- Control mode: V/F control
- Frequency command: Setting 50 [Hz] via Analog input (V1S)
- Accel/Decel time: Accel time 15 [sec], Decel time 25 [sec]
- Drive mode: Run/Stop via FX/RX, Control terminal: NPN mode

Wiring

Step	Parameter setting	Code	Description
1	Control Mode Selection	FU2-60	Set it to 0 (V/F).
2	Drive Mode	DRV-3	Set it to 1 (Fx/Rx-1).
3	Frequency Mode	DRV-4	Set it to 3 (V1S).
4	Operating Frequency Command 50 [Hz] Setting	DRV-0	Set 50 [Hz] via potentiometer (V1S).
5	Accel/Decel Time Setting	DRV-1 DRV-2	Set accel time to 15 [sec] in DRV-1 with decal time to 25 [sec] in DRV-2.
6	FX Terminal (M7)	IO-26	When FX terminal is turned ON, motor rotating in forward direction starts running at 50 [Hz] for 15 [sec]. When FX terminal is turned OFF, motor decelerates to stop for 25 [sec].
7	RX Terminal (M8)	IO-27	When RX terminal is turned ON, motor rotating in reverse direction starts running at 50 [Hz] for 15 [sec]. When RX terminal is turned OFF, motor decelerates to stop for 25 [sec].

- Group 2 - **G** **N** **B2** **P/B1**
- Group 3 - **P** **N** **G** **B1** **B2**

Terminals	Description	Terminals	Description
G	Ground terminal	N	Connect to drive terminal N
B2	Connect to DB Resistor's B2	P	Connect to drive terminal P1
B1	Connect to DB Resistor's B1	CM	OH common
N	Connect to drive terminal N	OH*	Over Heat Trip output terminal (Open Collector output: 20mA, 27V DC)
P	Connect to drive terminal P1		

■ Wiring for DB unit and DB resistor (For 5.5~90kW/7.5~125HP drives)

DB resistor terminal	Description
B1, B2	Wire terminal properly based on wiring block diagram. Connect a DB resistor to the DB Unit's B1, B2 terminals.
TH1, TH2	Thermal sensor terminal of DB resistor. Normal temperature (Ambient): Contact ON (TH1-TH2 closed) DB resistor overheated: Contact OFF (TH1-TH2 Open). Wire it to the drive terminal defined as External Trip.

DB (Dynamic Braking) Unit

Group 1

(Unit: mm)

iP5A

Group 2

(Unit: mm)

iP5A

External DB Resistor

iP5A do not have built-in DB resistor on power stack as factory installation. External DB Unit and Resistor (Optional) should be installed. See the following table for more details (ED: 5%, Continuous Braking Time: 15 sec). If Enable duty (%ED) is increased to 10%, use external DB resistor having twice Wattage rating.

Applied motor capacity (kW/HP)	Operating rate (ED/Continuous Braking Time)	100 % Braking Torque			150% Braking Torque
